

New Automatic Creep and Relaxation Tester

Elastocon has developed a new instrument which can perform automatic creep and relaxation tests. The EB 18 is a precise instrument that carefully lifts the rigs in and out of the oven. It has a very accurate displacement measurement with automatic compensation for the load cell and rig stiffness.

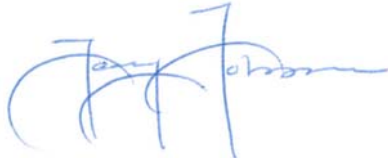

Based on the Elastocon EB 02 relaxation apparatus, the raising and lowering of the jigs is now motor driven. The jigs are mounted on a modified version of the EB07 triple temperature oven, permitting each test station to be run at different temperatures.

EB 18 can be equipped with load cells from 100 N to 2000 N.

More information is available at Elastocon AB. Send an email to info@elastocon.se or call us at +4633-22 56 30.

Best regards

Elastocon AB
